

EHC-O™

[Redox Compound - Oxygen Release]

EHC-O™ is an integrated source of **slow-release oxygen** combined with **nutrients** and a **pH buffering** agent to provide the ideal conditions for **rapid bioremediation** of organic and inorganic **soil, sediment** and **groundwater** contaminants. For organic constituents, EHC-O significantly stimulates catabolic activity of indigenous microflora further accelerating the rate of contaminant removal. EHC-O not only eliminates contaminants quickly—but also guarantees **significant cost savings** over other oxygen-release products on the market. EHC-O's **proprietary technology** is field proven and available today.

Key Benefits:

- Complete Technology
- Enhances Natural Attenuation
- > 50% Less Expensive
- Long Lasting

Contaminants Treated:

- Petroleum hydrocarbons
- PAHs
- Other non-halogenated organic compounds

Application Techniques:

- In situ
- Surface
